

## DIY PROJECT TABLE AND CHAIRS HOW-TO:

### SUPPLY

- Kilz Complete Coat™ Paint and Primer
- 100-150 Grit Sandpaper
- Painter's Tape
- Paint Brush
- Measuring Tape
- Chairs
- Table
- 3/8"-1/2" Synthetic Roller

**PRO TIP:** For glossy surfaces, scuff sand with the appropriate sandpaper prior to coating.

**PRO TIP:** Measure peak to peak, as well as the distance between the points along the side of the table.

**PRO TIP:** Use a high quality synthetic brush or 3/8"-1/2" synthetic roller for the application. When painting a horizontal surface, like a tabletop, apply thin coats.

### RESULT

- 1** For best results start with a properly prepared and previously painted or primed surfaces. Remove any loose or peeling paint and wash off dirt or grease with a non-soapy detergent or a TSP substitute. Rinse well and allow surface to dry.
- 2** Tape off areas to be painted. To achieve a geometric pattern we recommend using measuring tape to evenly space tape.
- 3** Stir paint before and during application to make sure it is mixed.
- 4** Remove the painters tape when the paint is wet, or have a razor to cut the film if you've let the paint dry.
- 5** Allow to dry. The product dries to touch in 2 hours (at 77° F and 50% relative humidity) or longer in cooler temperatures and/or higher humidity.
